**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Scott Paul on May 25, 2011.

The application has been amended as follows:

Abstract

An improved load balancing method, system, and computer program product handles popular object requests using a front-end cache, and hashing is applied only to the requests in the stream that were not handled by the front-end cache. A cache (e.g., a web proxy cache) is placed in front of a Level 7 switch, such that the cache services the popular requests from the cache based on the content of the request (e.g., based on the portion of an HTTP request following the domain name). The remaining requests are hashed and then routed to the back-end server. This allows the requests that make it past the cache to still be routed to the back-end server and take advantage of the efficiencies provided therefrom.

— ~~Preferably, a Level 4 switch is placed in front of a plurality of web proxy caches, each of which are in turn placed in front of a respective Level 7 switch, each of which are connected to a respective server farm, so that incoming web requests are handled on a round robin basis (or other SLB technique) before being sent to the cache, thus improving the throughput from the server farms to the requesting clients.~~

8. (Currently Amended) A computer program product for providing improved load balancing in a client/server environment, the computer program product comprising a computer usable [[medium]] **memory** having computer usable program code embodied therein, the computer usable program code comprising:

computer usable program code configured to receive an object request from a client;

computer usable program code configured to determine if the object requested by said object request is stored in a cache coupled between said client and a server farm;

computer usable program code configured to immediately return a copy of said object to said client if said object is stored in said cache;

computer usable program code configured to hash said object request;

computer usable program code configured to forward said hashed object request to said server farm;

computer usable program code configured to forward said requested object from said server farm to said cache for storage; and

computer usable program code configured to return a copy of said requested object to said client.

The following is an examiner's statement of reasons for allowance: claims 1-9 are allowed in view of the decision by BPAI rendered on March 23, 2011.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ALINA N. BOUTAH whose telephone number is (571)272-3908. The examiner can normally be reached on Monday-Friday (9:00 am - 5:00 pm).
